

Netsurf for Energy Efficiency

Collection and monitoring of your company's utility consumption data and subsequent correlation and integration to production data and physical operating data of machines and plants.

WHY

Energy Efficiency

Monitoring consumption allows the company to implement efficiency and savings policies. In addition, the data collected and processed can be used for the implementation of management systems, in particular **ISO50001** for **energy saving** aspects, and then for the drafting of the **sustainability report**.

Energy Analytics System:

- ✓ **simplified** interface that can be **customized** according to customer requirements
- ✓ **unified platform** for all actors
- ✓ **scalable** architecture
- ✓ **historicisation** of data in order to make a time comparison
- ✓ **machine learning** engine
- ✓ alarm and event **notifications**
- ✓ performance metrics and **KPIs**

Netsurf

Integrable and sustainable

Available in Cloud and On Premise, it can be **integrated with any meter** and **maintenance management systems**. It is also accessible **remotely** and on any device. The effective and strategic analysis of the data collected enables the best decisions to be made in terms of **reducing consumption**, as well as monitoring trends over time.

In this way, **energy efficiency** can be concretely realized.
