

UNI EN 15341 with **Netsurf**

With a few clicks, more than 15 reports on key maintenance indicators, including MTTR and MTBF, will be available in compliance with the UNI 15341 standard.

WHY

The standard:

The standard describes a system for the management of **maintenance indicators** to measure its performance in the context of influencing factors, such as **economic**, **technical** and **organizational** aspects, to assess and improve its efficiency and effectiveness in order to achieve **excellence in the maintenance** of technical assets.

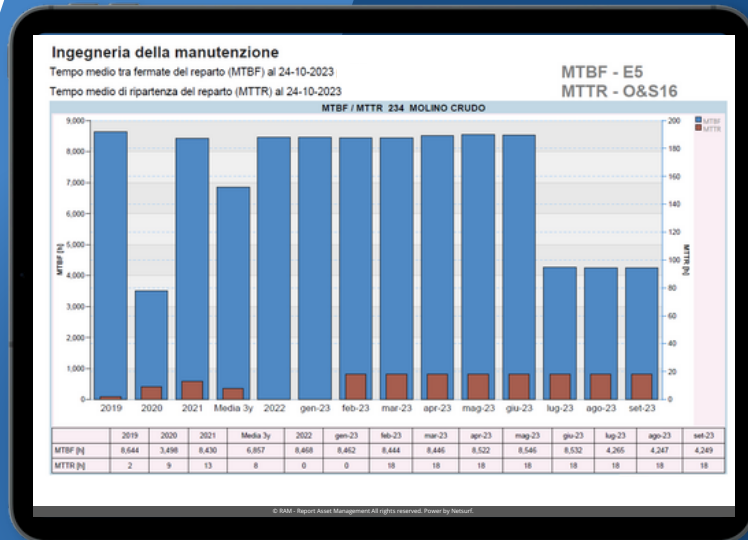

UNIque Report:

- ✔ Adoption of an established standard for **extracting knowledge** from data
- ✔ Simple, immediate and fast interface: in just a **few clicks** you get 15 indicators
- ✔ **Standardization** of calculation procedures: no human errors

Speed and effectiveness

Maintenance indicators are essential tools for **measuring and improving the performance** of processes, resources and assets, and for **achieving** quality, safety and efficiency **objectives**.

Netsurf makes it possible to have all this while enormously limiting the workload on the end user, who, **in a very short time**, will have a complete overview of his System, which can be extracted if necessary.
